FASTCOM

Business Continuity

Could you keep running, no matter what?

Back-up and recovery are two different but crucially important services every business needs, done well. We can back-up your servers offsite and recover them onto our infrastructure, so you can operate if need be from our data centre.

Our why is to realise your why. IT is simply our way to help you reach your vision. Our values are to hold ourselves accountable, put customers first, be relentless in our ways, collaborative in our style, and fair in every step.

Backup / Replication

Reduce your recovery time with regular backups that ensure you have the right level of protection to recover in the timeframes you need.

Recovery Infrastructure

Enable the recovery of your systems and applications from backups onto our virtual infrastructure in an emergency.

Offsite Storage Target

Use your existing backup setup regime, and send it to our cloud to store your backups securely offsite with us.

Server Recovery Exercises

Test your backup with a full recovery onto our infrastructure. Identify your level of recoverability, recovery times, areas to improve and suggested actions, all in a report.

We own it

Your end-to-end IT provider and partner: We own our network and any problems that arise. Big enough to take care of it yet small enough to care about you and your business, we offer six all-encompassing areas of IT solutions.

How can we help?

Book a chat and we'll be over with the coffee.
