FASTCOM

Networking
Are you well connected?

We invest in our own network. So you can rest assured that our network systems won't overload, traffic will automatically reroute, and your internet connection can remain a constant amongst any other change.

We're big enough to invest in our own technology, yet small enough that you won't get the overheads or peak-time delays of the larger public providers, you can trust we're here for good.

Private MPLS WAN

Connect all sites together and protect them in the data centre through one centrally managed firewall.

Business IP transit

Access the web with this gateway to the world for our Managed WAN Services.

ISP / Internet Access

Get internet connection for any site to operate stand-alone.

Fibre / Copper Connectivity

Connect every site through fibre (UFB) or copper (xDSL) based connectivity, or via mobile/wireless where there is no land based connectivity.

Private APN / Mobile 4G Data

Automatically reroute to secondary failover connectivity through 4G mobile networking. Or use in sites which have no fibre or copper connectivity options.

We own it

Your end-to-end IT provider and partner: We own our network and any problems that arise. Big enough to take care of it yet small enough to care about you and your business, we offer six all-encompassing areas of IT solutions.

How can we help?

Book a chat and we'll be over with the coffee.
