

Security

Do you sleep well at night?

Keep safe from hackers, spam, ransomware, viruses, crypto lockers. As owners of our network we even handle DDOS attacks. And because we look after every device or touchpoint, our security has you covered across your network from your firewall and routers to servers, laptops and phones.

There's a difference to how we work in that we cover everything. No finger pointing, no excuses. We also like to question the status quo. Just because there's one way, doesn't mean there's not another more suited to your business. We strive for better.

Network Operations Centre

Utilise help desk, monitoring and support services 24/7.

IP Transit Scrubbing

Add an extra layer of security to stop bugs before they get into your network.

SIEM & Threat Correlation

Identify concerning security issues and automate remediation to resolve the critical ones.

Managed Firewall

Protect your business and staff from the outside world, which is full of hackers and bad actors.

Anti-virus

Stop viruses from attacking your system, protecting information and systems with anti-virus.

Email Security

Protect your emails from spam with anti-spam and malware protection.

We own it

Your end-to-end IT provider and partner: We own our network and any problems that arise. Big enough to take care of it yet small enough to care about you and your business, we offer six all-encompassing areas of IT solutions.

How can we help?

Book a chat and we'll be over with the coffee.
